

VT iDirect Policy on the European REACH Regulation

VT iDirect supports the goals of the European REACH regulation (EC 1907/2006) on the Regulation, Evaluation, Authorization, and Restriction of Chemicals, which aims to protect human health and the environment and which entered into force on June 1, 2007.

VT iDirect meets all applicable REACH requirements and provides its customers with all required information about the substances contained in VT iDirect products. VT iDirect stays current with the list of substances of very high concern (SVHCs) maintained by the European Union Commission under this regulation, and complies with all reporting and registration requirements under REACH with respect to those substances.

All VT iDirect products are within the regulatory threshold of 0.1% (w/w) for any substance currently designated as an SVHC. It is also important to note that VT iDirect products are highly integrated and complex electronic systems, considered “articles” under REACH regulation, as opposed to “substances” or “preparations” and as such, under normal use conditions, users will not come into contact with any SVHC.

For any questions or inquiries related to VT iDirect products and REACH compliance send communication to REACH@idirect.net
