

DEFINING A NEW LUXURY EXPERIENCE IN INTERNET CONNECTIVITY AND ON-DEMAND ENTERTAINMENT

 ST Engineering

Kymeta makes connectivity on the water easy to access, always available, abundant and virtually invisible. Its metamaterials-based flat panel, electronically steered antennas, and terminals not only support high-throughput internet connectivity, they also enable vessels to be equipped with easy- to-install, auto-provisioning, smart systems that can scale to bring connectivity to any maritime vessel.

Recently, Kymeta selected ST Engineering iDirect as its first modem partner to support its innovative KyWay™ Terminal with a trusted solution that also supports Kymeta KĀLO™ connectivity services through the IntelsatOne Flex network.

Earlier this year, Kymeta and e3 Systems, its exclusive superyacht distribution partner installed Kymeta solutions on some of the world's most iconic yachts – including the White Rose of Drachs and the Maltese Falcon. Both the Maltese Falcon and the White Rose of Drachs utilize high-throughput internet connectivity provided by the ST Engineering iDirect X7 remote, showcasing HD Netflix streaming, video conference calls and TV streaming while at sea.

Kymeta and e3 Systems outfitted the White Rose with four Kymeta KyWay terminals for a months-long sea trial.

The terminals were tested with various MIR/CIR services from leading maritime service providers and satellite operators, including Speedcast and Hispasat.

“We observed the panel remained connected regardless of sea motion, pitch and roll, and exceeded our initial expectations of the performance of the electronically-steered beam,” said Håkan Olsson, Vice President of Maritime at Kymeta.

Captain Nikolaos Leontitsis of the Maltese Falcon said, “Kymeta’s consistent connection allows us to maximize the use of the Falcon’s sophisticated onboard network, and to offer our guests and crew cutting-edge communications and internet service together with the latest in on-demand entertainment options.”

Accessible and abundant internet access is now blending into the luxury experiences aboard these world-class superyachts with Kymeta’s flat panels. And the trials so far have proven that the systems are easy to install and configure remotely, setting a new standard for internet connectivity on board the world’s most recognizable yachts.

KYMETA™

“We observed the panel remained connected regardless of sea motion, pitch and roll, and exceeded our initial expectations of the performance of the electronically-steered beam.”
