Description

Building upon the MDM6100 Broadcast Satellite Modem software suite, the enhanced hardware platform of the MCX7000 extends the modem capabilities beyond single carrier support. This is in full compliance with all satellite DVB standards up to DVB-S2X. In a multi-modulator configuration, four 133 Mbaud carriers can be generated. In a multi-demod configuration, three 133 Mbaud carriers can be demodulated. As a modem, two carrier demodulation can be combined with the modulation of a 133 Mbaud carrier. Each and every transport stream embedded into the received carriers can be outputted on to one of the six (optional) ASI or dual Ethernet ports. The same data interfaces can be used as input ports for the modulator. Transmodulation of a received stream is also an option.

Its remote in-band management and software upgradeability makes it the receiver equipment of choice for remote unattended towers and headends. Subsequent releases of this future-proof DVB-S2X platform guarantee, by simple software upgrade, even increased functionality and higher density.

Markets

Broadcast

The MCX7000 is a new dense DVB-S2X multi-carrier satellite gateway, resulting in OPEX and CAPEX savings. Its field of use covers all Broadcast applications, from DTH and primary distribution to towers and head-ends to contribution and exchange networks. Its 133 Mbaud capability extends its use to HTS spot-beam transponders.
Delivering the highest uptime for vital links

Uptime and reliability are essential in the design of the multi-carrier gateway, and play a vital role in the satellite network. Input source redundancy and the shortest redundancy switch-over times, operating both in 1+1 and N+1 topologies, are setting the standard across the satellite industry.

Advanced capabilities are built in to the multi-carrier gateway, such as an MPEG Transport Stream analyser, which provides support of SMPTE 2022 FEC at the GbE inputs (for distributed IP headends), and native support of Carrier ID according to the DVB standard, as well as in the transport stream NIT Table. The re-ordering and gap filling of missing packets in transport streams is done with the Seamless input stream switching option. Special care was taken to cope with jittery transport streaming over IP inputs. The six ASI ports are programmable as inputs or outputs and allow for monitoring of operational ASI ports as well. To protect the satellite transmission, the Advanced Encryption Standard (AES) option can be activated. AES encrypts/decrypts - with a high-security level - the content of all DVB-S2(X) streams. On the Transport Stream level, BISS scrambling/ descrambling is also an option.

Get the best performance and lower your costs

The MCX7000 Multi-Carrier Satellite Gateway is one of the best performers to offer unmatched bandwidth efficiency optimization options, thereby lowering overall Total Cost of Ownership (TCO). The fully automated operation of Newtec’s field-proven Equalink® 3 predistortion technology is now available for any satellite transmission application providing up to 15% bandwidth gain in DVB-S2(X) 8PSK mode in single carrier per transponder constellations.

Clean Channel Technology®, in combination with DVB-S2X, improves satellite efficiency by up to 15%, thereby enabling much smaller carrier spacing.

Maximum symbol rates up to 133 Mbaud and modulations up to 256APSK (DVB-S2X standard) combined with Variable Coding and Modulation (VCM) allow for maximum throughput in large contribution links.

Up to eight transport streams are supported in both directions over the redundant GbE ports. In addition, another six transport streams can be routed in either direction over the optional six ASI ports. The streams received from up to three satellite carriers can be sent to any of the ASI or GbE ports.

The MCX7000 Multi-Carrier Satellite Gateway can be easily monitored and controlled via a comprehensive front panel menu, advanced web GUI as well as via SNMP protocol or RESTful API. This enables easy integration into any industry-standard EMS/NMS system. Its bidirectional remote in-band management and software upgradeability makes it the receiver equipment of choice for remote unattended towers and headends.

Evolve towards tomorrow’s technology

Built upon the flexible and latest generation programmable technology, the MCX7000 Multi-Carrier Satellite Gateway is a future-proof building block that lets any satellite network evolve to the next level of capabilities. A scalable, pay-as-you-grow, licensing and software upgrade mechanism that facilitates the launch of new services, or last-minute network design changes, without rebuilding the entire network infrastructure. Migration from ASI to GbE and IF to L-band is facilitated by simple in-field installation of license keys. Powerful MPE encapsulators enable transmission of M-ABR streams over satellite.

Migration of standard distribution links towards the new DVB-S2X standard can be as simple as inserting an MCX7000 Multi-Carrier Satellite Gateway in the headends while keeping the installed base of Integrated Receiver/Decoder (IRDs). Efficient transmission of Ultra High Definition (UHD) TV bouquets over two or three transponders for Direct-To-Home (DTH) only requires the Channel Bonding license.

Featured modulator technologies such as Equalink 3 linear and non-linear predistortion and Clean Channel Technology bring best-in-class output spectrum, enhancing the satellite link margin and throughput to its optimum level. The non-linear post compensation in the receivers brings extra link margin when in uplink limited multi-carrier per transponder constellation.
Specifications

Key Features

- Configurations:
  - 4 x DVB-S2X carrier modulator
  - 3 x DVB-S2X carrier modulator with optional ASI interfaces
  - Modem with one or two modulators with optional ASI interfaces
  - 3 x DVB-S2X carrier demodulator
  - Modem with one or two demodulators with optional ASI interfaces
- Minimum symbol rate: 256 kbaud
- Maximum symbol rate: 133 Mbaud
- Data rates up to 425 Mbit/s
- IF (70/140) and L-Band (950 - 2150) high power outputs
- Demodulators with dual L-band input
- Highest system reliability and service uptime through robust design and industry leading redundancy solutions
- Exceptional jitter recovery on TS over IP inputs with SMPTE 2022 FEC
- Redundant optional ASI or GbE interfaces in single stream mode
- Redundancy with main TS over ASI and back-up TS over IP input
- Redundant optional ASI interfaces for up to 3 TS input streams
- Stream and Source redundancy on TS over IP inputs
- Optional Seamless Protection Switching acc. SMPTE 2022-7 on TS over IP inputs
- User configurable alarm table for device & carrier redundancy switching
- TS null packet stuffing detector
- Carrier-based redundancy switching in a multiple modulator 1+1 configuration
- Input redundancy with Payload Stuffing as Switching Criterion
- Input redundancy with TR 101 290 Priority 1 parameters as Switching Criterion
- Built-in TS Analyser with PCR jitter measurements
- Accurate link margin monitoring through the use of the Noise & Distortion Estimator (NoDE) tool
- RFI reduction using DVB RF Carrier ID (DVB-CID) and NIT table CID
- Automatic TS rate adaptation
- ASI and TS over IP monitoring outputs of input TS streams
- L-band monitoring output
- Market leading RF purity and performance
- Programmable amplitude slope equalizer
- 8 x PRBS generators and 3 x PRBS detectors for link performance tests
- Optional high stability internal clock reference
- Optional dual AC power supply
- Low TCO as a result of very high bandwidth efficiency
**Use Cases and Applications**

Multi-modulator equipment for OPEX and CAPEX reduction in back-up or dense DTH HUB stations. The support of DVB-S2X and its upgradeability to the transmission of bonded carriers makes the MCX7000 the preferred solution for the transmission of future UHDTV bundles.

Efficient distribution to towers and headends resulting in OPEX and CAPEX savings is a major application for the MCX7000. It brings higher-efficiency, limited need for rack space and with its transmodulation capability allows for upgrade of existing stations to the DVB-S2X standard while preserving the installed base of IRDs. This allows for decoupling modulation and video encoding technology roadmaps and investments.

Another use case is the reception of multiple contribution links in a single HUB device, bringing down CAPEX.

Broadcast contribution modem on standard and High Throughput Systems (HTS) spot-beam transponders.

In closed video distribution networks, AES encryption of the baseband frames results in extra security on a physical layer level.

MCX7000 is an optional part within a Newtec Dialog® multiservice broadcast solution.

**IP/Ethernet frames Encapsulation/Decapsulation**

- 4 MPE Encapsulators (in option)
- 4 MPE Decapsulators
- Layer 3 static router over satellite
- Layer 2 bridge over satellite (VLAN compatible)
- Max aggregate 70 Mbit/s

**Modulation and Demodulation**

**Supported Modulation Schemes and FEC**

- **DVB-S**
  - Outer/Inner FEC: Reed Solomon / Viterbi
  - MODCODs: QPSK: 1/2, 2/3, 3/4, 5/6, 7/8
- **DVB-DSNG**
  - Outer/Inner FEC: Reed Solomon / Viterbi MODCODs: 8PSK: 2/3, 5/6, 8/9
  - 16QAM 3/4, 7/8
- **DVB-S2** (acc. ETSI EN 302 307 v1.2.1 for DVB-S2)
  - Outer/Inner FEC: BCH/LDPC

**52 MODCODs (short & normal frames):**

- QPSK: from 1/4 to 9/10
- 8PSK: from 3/5 to 9/10
- 16APSK: from 2/3 to 9/10
- 32APSK: from 3/4 to 9/10

- **DVB-S2X standard**
  - Outer/Inner FEC: BCH/LDPC
  - 53 MODCODs (normal frames): QPSK: from 1/4 to 9/10
  - 8PSK: from 3/5 to 9/10
  - 16APSK: from 26/45 to 9/10
  - 32APSK: from 32/45 to 9/10
  - 64APSK: from 11/15 to 5/6
  - 128APSK: 3/4, 7/9
  - 256APSK: 32/45, 3/4
  - 13 Linear MODCODs (normal frames):
    - 8APSK-L: 5/9, 26/45
    - 16APSK-L: from 1/2 to 2/3
  - 32APSK-L: 2/3
  - 64APSK-L: 32/45
  - 256APSK-L: 24/65 to 11/15

- **41 MODCODs (short frames):**
  - QPSK: from 11/45 to 8/9
  - 8PSK: from 7/15 to 8/9
  - 16APSK: from 7/15 to 8/9
  - 32APSK: from 2/3 to 8/9

- Support of DVB-S2 VCM mode (on modulator and demodulators)

**Symbol Rate Range**

- **Modulator**
  - DVB-S2, DVB-S2X 256 kbaud - 133 Mbaud
  - DVB-S & DVB-DSNG 1 - 45 Mbaud

**Demodulator**

- DVB-S2, DVB-S2X 256 kbaud - 133 Mbaud

**Frame Length**

- DVB-S & DVB-DSNG 188 bytes
- DVB-S2 & DVB-S2X Short Frames 16200 bits
- DVB-S2, DVB-S2X Normal Frames 64800 bits

**Clean Channel Technology**

- Roll-off option (on modulator): 2%
- Roll-off: 5% - 10% - 15% - 20% - 25% - 35%
- Optimum carrier spacing
- Advanced filter technology

**Equalink 3**

- Linear and non-linear predistortion for all MODCODs

**Carrier Interference Reduction**

- DVB RF Carrier ID (DVB-CID)
  - Spread Spectrum Modulator (BPSK)
  - Supports User Data
  - Compliant to ETSI 103 129 v1.1.1 (2013-05)

- Carrier ID NIT Table

**Channel Bonding**

- **Modulator**
  - For TS transmission
  - According to DVB-S2X standard
  - Up to 3 bonded 72 Mbaud carriers

- **Demodulator**
  - Maximum rate 450 Mbps (over UDP);
  - 425 Mbps (with RTP-FEC)
  - L-band output
Modulation Interfaces

L-BAND (CONFIGURATION OPTION) (QTY: 0-4)
- Connector SMA(F), 50 Ohm
- Frequency 950 - 2150 MHz (10 Hz steps)
- Level -35/+7 dBm (+/- 2dB)
- Return loss > 14 dB
- Switchable 10 MHz Reference
- Spurious performance
  Better than -65 dBc/4 kHz @ +5 dBm output level and > 256 kbaud
  Non-signal related: < -80 dBc @ +5 dBm output

IF-BAND (CONFIGURATION OPTION) (QTY: 0-4)
- Connector BNC (F) - 75 Ohm (intermateable with 50 Ohm)
- Frequency 50 - 180 MHz (10 Hz steps)
- Level -35/+10 dBm (+/- 2 dB)
- Return loss 50 Ohm: > 14 dB
  75 Ohm: > 20 dB
- Spurious performance
  Better than -65 dBc/4 kHz @ +5 dBm output level and > 256 kbaud
  Non-signal related: < -80 dBc @ +5 dBm output

L-BAND MONITORING (QTY: 0-4)
- Connector SMA (F), 50 Ohm
- Frequency Same as L-Band output frequency or 1050 MHz in case of IF output option only
- Level -45 dBm
- Return loss > 10 dB

10 MHZ REFERENCE INPUT
- Connector BNC (F), 50 Ohm
- Input level -3 dBm up to + 7 dBm
- Frequencies 1, 2, 5, 10, 20 MHz

10 MHZ REFERENCE INPUT
- Connector BNC (F), 50 Ohm
- Output level +3 dBm (+/- 2 dB)

Demodulation Interfaces

DUAL L-BAND INPUT (QTY: 0-3)
- Connector 2 x F-type (F), 75 Ohm
- Return loss > 7 dB (75 Ohm – F(F))
- Maximum total input power: - 10 dBm
- Maximum input signal power: (-30 + 10log(f)) dBm where f=baud rate in Mbaud
- Minimum input signal power: (-80+Es/No(Thr)+10log(f))dBm where f=baud rate in Mbaud and Es/No(Thr)= Es/No value in dB for QEF reception
- Frequency 950 - 2150 MHz
- Adjacent signal < (Co+7) dBm/Hz with Co = signal level density

LNB POWER AND CONTROL
(ON 1 L-BAND INPUT/DEMOD)
- Max. current 350 mA
- Voltage
  11.5 -14 V (Vertical polarization)
  16 -19 V (Horizontal polarization) & additional
22 kHz +/- 4 kHz (band selection according to universal LNB for Astra satellites & DiSEqC command transmission)

Internal 10 MHz Reference Frequency

STANDARD STABILITY
- Stability: +/- 2000 ppb over 0 to 70° C
- Ageing: +/- 1000 ppb/year

VERY HIGH STABILITY (OPTIONAL)
- Stability: +/- 2 ppb over 0 to 65°C
- Ageing: +/- 500 ppb/10 year

Generic

MONITOR AND CONTROL INTERFACES
- Web server GUI (HTTP) via web browser
- M&C connectivity via separate Ethernet links
- Diagnostics report, alarm log (HTTP)
- SNMP v2c
- RESTful API

ALARM INTERFACE
- Electrical dual contact closure alarm contacts
- Connector 9-pin sub-D (F)
- Logical interface and general device alarm

Physical

- Height 1RU, width: 19”, depth 51 cm, 5.8 kg
- Power supply: 90-130 & 180-260 Vac, 260 VA, 47 - 63 Hz
- Temperature:
  Operational: 0°C to +50°C / +32°F to +122°F
  Storage: -40° to +70°C / -40°F to +158°F
- Humidity: 5% to 85% non-condensing
- CE label and UL
